Bridget .- Yes, you are quite correct. If you pour kerosene on a dull fire it will quicken it effectually. If you are lucky, you may survive the quickening of that fire and live to try it again; but the chances are agin it, Bridget-the chances are agin it!

Lawyer.—Your scruples of conscience do you great credit. Feeling as you do, it would no doubt injure your professional standing should you undertake the defense of a criminal belonging to a low-down family. Don't you defend any criminal whose social standing is not first-rate.

Eliza Jane .- Trim your light-blue silk dress with old-gold satin ribbon (greenlined, if possible), and have a good many oxidized silver buttons in front. Your long yellow gloves will go admirably with this costume, and with your maroon velvet hat you will look quite too altogether bewitching for anything.

Thomas W.-Well, let us suppose that the burglar is in one of the upper rooms and you want to catch him. You just get the rolling-pin, or two or three of them if you can, and lay them on the stairs. Then make a row and the burglar will run down, but he won't run far before stepping on a rolling-pin, and then you can descend at your leisure and capture the remains of him at the foot of the stairs. It isn't a good plan, however, to keep rolling-pins on the stairs habitually. The wrong person is sure to forget them, and then there is trouble and a doctor's bill.

Angelina .- No, my dear. If you are young and good looking, and possessed of a private fortune of \$100,000 in your own right, don't you go and get married if you want to succeed as an author. If you can only persuade the editorial fraternity that you have the above-men-tioned points in your favor, you've no idea what a high opinion they will form of your manuscripts. They will accept everything you can write, and will correspond with you in the most friendly way. But just as sure as you get married they will lose all interest in you, and will even decline with thanks the pretty little sonnets which you will indite to "Our Home" and "My Baby" and the rest. No, Angelina, don't you do it. That's our advice; but if you are really bent upon marriage, and your intentions are strictly honorable, why, we might put you in the way of hearing something to your advantage. Anyhow, suppose you send us your real name and address. We might hear of something that would suit you, you know.

James .- We are always glad to give advice to young men who, like you, have \$5,000 with which they wish to speculate in Wall street. You want to get introduced to some broker, in the first place, and tell him your plans. He will tell you not to put your money up called the day before, you might have doubled your investment. He won't give you any advice-not he-but he will take your \$5,000, and by a neat and mysterious process which he calls buying on a margin, he will lay in about a million dollars' worth of some mining stock, which is bound to rise to par next week, and make you a millionaire. Every day you watch the reports, and at a small loss, and re-invest in something else, and at the end of three or four weeks your money will be all gone. That is all there is. Nothing difficult about it! Oh, by all means go and put money that you can afford to lose in Wall street! It will be safe there! So safe that you will never get it again. But then you will know where it is, and you will enjoy seeing your broker driv-ing his span of bays in the park.—Our Continent.

Fishing on Florida Keys.

I need not mention what you are to take in the way of comforts, luxuries and knick-knacks, but you will want streams through the interior, but genuine hooks and lines—not pin hooks and with different yields: spool thread lines, but steel hooks from 36 bushels to the acre will one-eighth to one-half in thickness, with 50 always a small chain of five to six feet 60 in length, which is to be fast to the hook, in case, as is often true, a shark should take hold. The bait generally used readily bite at the hook, but may be had by casting the net which your boatman or guide will be sure to take along. Now so far as fishing is concerned, you have your fun begins.

Look out, now! See that large red fish making for the bait-your blood may curdle and hair stand on end, for twenty acres to produce five hundred now you are "into business." We will bushels of corn or two hundred of wheat, say that you have been fishing two hours I am certainly not improving the quality and have some twenty five of the finest of the land, but if I grow this amount fish in the world, these ranging in on ten acres it only shows a much weight from five to twenty-five pounds, better condition of soil on the land unand embracing many varieties, such as der cultivation, but on the other ten I sheeps-head, trout, pompano, red fish, and two or three small sharks, called cubs, shovel-nosed, etc. But as the fun is yet in store, you must clean these fish when they are caught, while the tide is ebb, that the blood and offal may be washed into the Gulf.

As the tide begins to flow prepare for one of the greatest events of a fisherman's career. Bring the ax, cut a solid stake four to six inches in diameter and five to six feet long, sharpen and drill it into the ground two-thirds or threequarters of its length-now get out the business" line and the devil hook, put on five or six pounds of this red fish, and all hands "stand by."

There! there! he's on, hold fastkeep the line from slipping or working up and let one man hold the top of the stake—let him worry a little—all hands

now for a pull.

His head being out, the ax will be serviceable. This is a shark—a whale the lion of the deep! One feels that he never wants to bathe in the surf again. We will take this fellow's jaw-bone and dry it for a trophy-a keepsake, a frightful curiosity, plenty large for a small man to crawl through when open. American Angler.

A Chat About Corn.

I am just home from a corn show at which I was selected to act on the awarding committee. The premiums—\$10, \$5, and \$2.50—were offered for the ten best ears. There were 196 entries, and to my surprise the white corn comprised more than three-fourths of the samples shown, there being 151 of that sort to forty-five of yellow, red and mixed. I think the fifty best samples would have averaged more than twelve pounds to the lot of ten ears each, which would make about a bushel of corn-shelled, not ears-to each fifty-five ears. There were samples that weighed as high as seventeen pounds to the lot, but the ears were not uniform or perfect, and weight was not considered in making the award. The three lots that took the premiums were white, and weighed thirteen pounds thirteen ounces, fifteen pounds two ounces, and fourteen pounds three ounces respectively, the lightest lot taking the first premium. After the awards had been made we learned that they all went to one family, a father and two sons, but all on different farms, and that they were noted for their fine corn and careful selection of seed, and had taken premiums at the Centennial and many other fairs where they had

exhibited. I believe that most farmers undervalue good selected seed corn. I have long been of the opinion that there was no other way in which we could so cheaply add to the yield of our corn crop as by a careful selection of seed. To add twenty or even ten per cent. to the yield of a corn crop by extra fertilization or tillage, will require considerable outlay of time or money; but the amount of seed required for an acre is so small that the added cost is hardly worth computing, and I know that by a careful and persistent selection of seed we can add more than twenty per cent.

I use the word "persistent," and I consider persistence important, for he who selects his seed corn for three years and then fails to do it, loses all that he has gained. I do not indorse the plan of changing seed, which is recommended by so many, and believe it is as unwise to change, unless you are sure of getting a better variety, as it would be to do the same with a herd of cattle. My experience in seed growing has taught me something of the importance of establish a variety. Nearly ten years ago I found an ear of an early variety of | tartar rubbed in it, and the well-beaten sweet corn, that was dark red, and I planted it. The product was mixed, separately until stiff; add them and two more than half of it being white, and the red all shades from very pale to ter two tins, pour in the cake, and bake blood red. I selected each year the darkest colored, and in five years I had bred out the white and established a blood-red variety. Careful selection if followed long enough will change an early to a late, or a large to a small variety, or vice versa, with just as much certainty as the same care will establish a point in stock breeding. I like Dr. Sturtevant's idea of "pedigreed seed who will breed a good variety till its then he will show you how, if you had type is established will find customers who will take his crop at prices that will give him a large profit.

The only way to grow cheap corn is to increase the yield per acre, and we to taste.—N. Y. Post. should take every possible means to do this. The average yield per acre for my State (Ohio) is now about thirty-six bushels, and it will require no argument to show that there can not be much profit on such crops, and this being the average per cent. of the farmers whose crops fall this crop much cheaper than the farmers of the Eastern States. I have with farmers to ascertain their estimates the crib an acre of corn, and the average cost, including rent, is given by them at about \$12 per acre. In 1877 I offered several valuable premiums for the best acre of corn, each statement to be accompanied with a detailed account of the cost of growing and cribbing. Nineteen reports were sent in, and the average cost, not allowing rent of land, was about \$9 per acre. We will estimate plenty of guns and fishing tackle, not | the entire cost of growing and harvesting spoons, flies, etc., as used in the little an acre of corn at \$14, and now let us see what the erop will cost per bushel

36 bushels to the acre will cost 39c. per bush.

I think it is profitable to study such figures as these, for they show where here is a mullet; these fish do not the profit comes in in grain-growing. There is a fixed cost in growing an acre of grain, whether the yield is light or heavy, and every bushel we can add to the yield per acre reduces the cost per but to wait for the flood tide, and to be bushel. Still another point I wish to located at or near some "pass," and | call attention to is this: the farm always improves under such management as gives a large yield per acre, and deteri-orates under small yields. If I cultivate can grow a renovating crop, like clover, which will give me a profit and at the same time fit the land for a heavier grain crop. Under the first conditions there can be neither profit nor improvement; under the second, both. I have little doubt that in many of our graingrowing sections the decreasing of the area under cultivation by one-half would in a few years give as much grain at a largely reduced cost per bushel. - W. P. Brown, in Rural New Yorker.

> -To illustrate that the office of Governor of New York is held by a rather frail tenure, the New York Sun recalls that, though there have been twentytwo elections for Governor in New York State within the past forty-five years, four Governors only have been chosen for two terms in succession. Marcy was elected three times. Seward was first elected in 1838 and again in 1840. Seymour was first elected in 1852, was beaten in 1854, and was successful in 1862. In almost every case, those Governors who were not re-elected, either ran for a second term and were defeated, or failed in their efforts to get a to wed her. The gay letter writer, second nomination in their party con-

HOME AND FARM.

- Inow brings to the earth more fertilizing ammonia than any other process in nature.

-An Iowa farmer, writing to the Homestead, gives as his experience that an exclusive diet of corn is the cause of hog cholera. He claims that the hog should be treated to a variable diet like any other animal, and that corn is not a complete article of food, the hog requiring suitable food for converting into bone and muscle as well as fat.

-It is stated that five of the hundreds of firms engaged in the seed business in the United States annually pay \$380,000 for postage on seeds. The rate is one cent for each ounce or fraction thereof, while for books, cards, chromos, and many other articles much more likely to injure the contents of the mail-bags, the rate is one cent for each two ounces or fraction thereof.

-At the New Jersey Experimental Station it was found that sorghum meal from amber seed, freed from hulls, had no injurious effect upon milch cows; that it had no noticeable effect on the taste, color, or chemical composition of the milk; that in digestibility it probably falls slightly below corn-meal, for, when fed pound for pound with cornmeal the latter gave seven per cent. more milk.

-The American Cultivator says Whoever places much dependence on the strainer for securing clean milk will never make gilt-edge butter. Allowing dirt to get into the milk and then depending on the strainer to get it out, is a poor apology for cleanliness. More or is of the opinion that there is nothing equal less of the dirt, especially everything of to the St. Jacobs Oil for pain. The Great a soluble nature, and some that is not, will find its way through the meshes of

-For Clifton loaf use half a pound of butter, one pound of sugar, one pound to the yield of the corn on many farms. of flour, six eggs, half a pint of milk, one teaspoonful of cinnamon, and one tablespoonful of baking powder; beat the sugar, butter and spice together until light, and then add the milk, the eggs, well beaten, and the flour; beat thoroughly and add baking powder. Butter and paper a pan, and bake in a moderate oven.—Indianapolis dournal, will be netural therefore the finance one Beethoven. It moderate oven .- Indianapolis Journal.

If canned salmon is used, heat it to the add a pint of water or of stock if not too rich; let it simmer gently. When the sauce begins to whiten add two tablespoonfuls of lobster meat, picked very fine, pepper and salt, and lemon juice

Composting Manure.

One of the important questions which every farmer has to decide is the best pretty soon your broker will sell you out | yield, there must, of course, be a large | method of composting manure. Farmers do not agree on this subject; while far below this, and who produce corn at an actual loss. We at the West, in the nure in its green state and compost it great corn-growing districts, can grow with the soil, others believe it best to compost it in the yard by mixing with it an equal quantity of muck or loam. Adfor two months past been corresponding vocates of the last method claim that the manure is thus decomposed and of the cost of growing and delivering at brought into plant food that is immediately available. The advocates of composting directly with the soil claim that it saves a large amount of labor of hauling in material to compost with, the pitching of it all over, and the carting out and spreading twice the quantity; and they also claim that during the process of decomposition in a compost heap, under ordinary conditions, a portion of the fertilizing elements is lost; while if applied directly to the soil the process of decomposition improves the condition of the soil and prepares it for plant growth much better than if applied after decomposition has taken place.

While it is probably best for most of crops to apply the manure in the green state, there are some crops that need forcing with manure already well decomposed. For example, strawberries that have been set one year sometimes require a fertilizer that will act at once. Grass land, if manured between the first and second crop, should have well de-

composed manure. The farmer in composting his manure should never forget that all of the muck, loam or sand which he mixes with his manure, above that which is necessary to absorb the liquids and gasses, is a waste of labor, and only makes his manure heap a deception which his crops will surelyfi nd out. While it is important that every farmer should always have at hand sufficient absorbents to prevent the loss of the liquids, but few farmers work to the best advantage when they haul into the barn yard as many loads of muck, loam or sand as they have of manure. The large additional cost of removing twice or three times such large quantities of materials, but little better, if as good, as the soil upon which it is spread, never comes back in the increase of crops .- Massachusetts Ploughman.

-The divorce statistics of Maine for the past five years give an unpleasant picture of home-life in that State. There have been about twenty-four hundred divorces decreed during the period in question, and thus nearly five thousand persons have been released from the bonds which were assumed with at least nominal solemnity. The ratio is probably one divorce to ten marriages in Maine. The ratio in Massachusetts in 1879 was one to twenty-one.

-A Montana paper reports that a girl traveled all the way from Massachusetts to Bozeman, in that Territory, to marry a man whom she had never seen, but who, by correspondence, had promised however, was not to be found when she

seems to have been much hurt by a

composed of damaged corn meal and in the Chicago Pharmacist and Chemist adding, with an instinct truly profesgently as castor oil.*
